PLAN FUNDATII CLADIRE sc. 1:50
BUILDING FOUNDATIONS PLAN sc. 1:50

ORDINEA DE EXECUTIE :
1. Verificarea capacitatii portante a pernei de balast (cota superioara NSS-1,50m) prin probe Proctor ;
2. Turnarea in elevatie, prin cofrare, a fundatiilor cladirii si a ocnei de cabluri ;
3. Pozitionarea retelelor de instalatii ;
4. Executarea umpluturii de pamant interioare, intre fundatii. Se va face cu pamant sanatos (materii organice <5%), prin compactare 98% in straturi succesive de 10 cm grosime ;
5. Turnarea stratului suport al pardoselii, a soclurilor si a fundatiilor de utilaje, a canalelor.

SEQUENCE OF EXECUTION :
1. Cheking the bearing capacity of ballast bed (bench mark at the upper part NSS-1,50m) by Proctor test ;
2. Pouring the building foundations and manhole in elevation by concrete encasement ;
3. Positioning the installations networks (pipes) ;
4. Making the inside earth filling between foundations. This will be made using proper earth (organic matters <5%), by 98% compaction in 10 cm thick succesive layers ;
5. Pouring the support layer of floor, the base and foundations for equipment, the cable channels.

NOTA 2 :
Pentru cota de fundare indicata, natura terenului bun de fundare (perna de balast compactata) a fost considerata ca avand capacitatea portanta $p_{conv} \geq 150$kPa.
Inainte de turnarea fundatiilor este obligatorie confirmarea capacitatii portante a terenului, pe baza de proces verbal de lucrari ascunse, intocmit de un specialist geotehnician autorizat.
NOTE 2 :
For the indicated foundation quota, the nature of proper foundation ground (compacted ballast bed) was considered to have bearing capacity $p_{conv} \geq 150$kPa.
Before pouring the foundations, it is compulsory to confirm the bearing capacity of ground based on a hidden works report drawn up by an authorized professional geotechnician.

NOTA 3 :
Pentru toate armaturile, raza domului de indoire va fi egala cu **3d**
NOTE 3 :
*For all reinforcements, the radius of mandrel for bending is equal to **3d***
